Summary

I build the systems that find and qualify buyers — sourcing, enrichment, account scoring, and the evaluation loops that keep the output honest. Previously built the outbound research and evaluation stack for an early-stage AI startup.

Experience

Consultant, Ollive

05/2026 – 08/2026 | San Francisco, USA

- Built and own the outbound research engine: sources target accounts, enriches them from public evidence, and scores each one against our ICP
- Built a generated content pipeline: one canonical source, many downstream outputs, nothing hand-maintained twice
- Own CRM data operations and funnel reporting end to end

Founder, ByteMill

04/2026 – 05/2026 | Kanpur, India

- Ran demand research before building a consumer digital-carbon-footprint product. The research said the market wasn't there, so I shut the company down in five weeks rather than spend a year finding out the slow way

Research Assistant / Teaching Assistant,

09/2020 – 12/2021 | Philadelphia, USA

Drexel University

- Research assistant at the Drexel Wireless Systems Lab. Teaching assistant for the College of Computing & Informatics.

Developer, Vanguard

04/2021 – 08/2021 | Philadelphia, USA

- Built several features for investment-management applications used by global clients, working from product and design requirements

Skills

Systems: Outbound research systems, Enrichment pipelines, Account scoring, LLM evaluation design, Agentic workflows, CRM data operations, Funnel reporting

Tools: Python, SQL, JavaScript, Claude API, OpenAI API, MCP, Clay, Apollo, FullEnrich, HubSpot

Education

BS - Data Science,

08/2024 – Present

Indian Institute of Technology, Guwahati
